Designed to grow in shallow water, 2" to 6" deep. It is ideal for shallow water wetlands and within the emergent zone of a pond or stream shoreline. Nearly 50% of the seeds in this mix are sedges, rushes, and grasses; the balance is a matrix of wildflowers, providing an array of blooms from May through October. This emergent mix will result in a medium-tall profile with an average height of 3.3' by seed count. To achieve appropriate seed-to-soil contact for germination this mix must be planted prior to establishing normal water levels, or the water body must be drained in order to expose the soil within the targeted seeding area prior to seeding. We recommend installing appropriate temporary erosion control blanket over areas seeded with this mix.
